Title: 36 year old man presenting with pancreatitis and history of recent commencement of orlistat. Case report.

Authors:

Sarah J Napier (sarahjnapier@yahoo.co.uk)

Matthew C Thomas (mjcthomas@doctors.org.uk)

Version: 2 **Date:** 28 July 2006

Author's response to reviews:

Thank you for your comments. In response to your points;

1) This man was a teetotaler and had never been a heavy drinker.

2) Unfortunately we do not have a fasting lipid profile from before the pancreatitis. A total cholesterol was the only thing on record which was normal

3) His corrected calcium was normal at 2.41

4) There was no family history of pancreatitis or hyperlipidaemia

I have now added a CT scan of the pancreas.

Many thanks for your help
