Title: Assessment of insulin resistance by a ^{13}C glucose breath test: a new tool for early diagnosis and follow-up of high-risk patients

Version: 2 **Date:** 7 April 2010

Reviewer: Richard Z Lewanczuk

Reviewer's report:

I have reviewed the author responses and I now find the paper satisfactory for publication. My only comment is that the authors inconsistently use the "-" sign to denote a negative correlation. Towards the front of the paper they omit it, while at the end they use it correctly.
