Title : Effect of supplement with lactic-acid producing bacteria on fatigue and physical activity in patients with chronic fatigue syndrome

Journal: Nutrition Journal

Authors: Asa Sullivan, Carl E Nord and Birgitta Evengard

Dear Dr. Evengard,

Your manuscript entitled " Effect of supplement with lactic-acid producing bacteria on fatigue and physical activity in patients with chronic fatigue syndrome" has been reviewed by two experts. Both reviewers agreed that your manuscript describes benefit of dietary supplementation with lactic acid producing bacteria in chronic fatigue syndrome (CFS) patients, which would be of potential interest to readers of Nutrition Journal. However, a number of important concerns were raised during the review that need to be addressed. The reviewers also felt that the manuscript needed some language corrections. These concerns are explained in detail in the appended critiques below.

It is important for the major findings of your study to be intelligible to all of our readers, including those who are not specialists in the field. Please revise the manuscript accordingly by providing answers to all of the queries raised and submit it back for review.

Thank you for giving the Nutrition Journal the opportunity to consider your work.
