

Reviewer's report

Title: Evaluation of effectiveness of class-based nutrition intervention on changes in soft drink and milk consumption among young adults.

Version: 1 **Date:** 27 April 2009

Reviewer: Mary Murimi

Reviewer's report:

Major Compulsory Revisions:

This article is well written and provides adequate details of the study design. However, lack of control and the marginal significance of major variables of interest nullifies the significance of the results. The article does not have any news to report. For example, No significance change was observed for the total milk consumption. Whole milk consumption did not change although reduced low fat milk intake decreased. Comparing 9 males with 70 females biases data. Report p-values as P less than instead of equal to.

Level of interest: Reject as not of sufficient priority to merit publishing in this journal

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
